Product Information

Product Name	: Recombinant Human VIMENTIN (rhVIMENTIN)
Synonyms	: VIM
Description	: Vimentin is a type III intermediate filament (IF) protein that is expressed in mesenchymal cells. Vimentin is the major cytoskeletal component of mesenchymal cells. Because of this, vimentin is often used as a marker of mesenchymally-derived cells or cells undergoing an epithelial-to-mesenchymal transition (EMT) during both normal development and metastatic progression. Vimentin plays a significant role in supporting and anchoring the position of the organelles in the cytosol. Vimentin is attached to the nucleus, endoplasmic reticulum, and mitochondria, either laterally or terminally. The dynamic nature of vimentin is important when offering flexibility to the cell. In essence, vimentin is responsible for maintaining cell shape, integrity of the cytoplasm, and stabilizing cytoskeletal interactions. It has been used as a sarcoma tumor marker to identify mesenchyme (Ref. Wikipedia)
